

# SETTING UP APPLICATION ENVIRONMENT

## CREATE FLASK PROJECT

Date	25 September 2022
Team ID	PNT2022TMID43624
Project Name	Plasma Donor Application

**Step 1:** Beginning the Flask installation with python installation.

Run the python setup and install the newest version of python.

**Step 2:** Open Command Prompt and cross-verify the installation of python by typing:

To check the version: **python --version**

To check the path: **pip --version**

```
Command Prompt
Microsoft Windows [Version 10.0.22000.1098]
(c) Microsoft Corporation. All rights reserved.

C:\Users\REENA>python --version
Python 3.11.0

C:\Users\REENA>pip --version
pip 22.3 from C:\Program Files\Python311\Lib\site-packages\pip (python 3.11)

C:\Users\REENA>py -m pip --version
pip 22.3 from C:\Program Files\Python311\Lib\site-packages\pip (python 3.11)

C:\Users\REENA>
```

**Step 3:** After python installation, we need to begin with flask installation by typing:

**py -m install flask**

```
Command Prompt
C:\Users\REENA>py -m install flask
C:\Program Files\Python311\python.exe: No module named install

C:\Users\REENA>py -m pip install flask
Defaulting to user installation because normal site-packages is not writeable

  DEPRECATION: MarkupSafe is being installed using the legacy 'setup.py install' method, because it does not have a 'pyproject.toml' and the 'wheel' package is not installed. pip 23.1 will enforce this behaviour change. A possible replacement is to enable the '--use-pep517' option. Discussion can be found at https://github.com/pypa/pip/issues/8559
  Running setup.py install for MarkupSafe ... done
  WARNING: The script flask.exe is installed in 'C:\Users\REENA\AppData\Roaming\Python\Python311\Scripts' which is not on PATH.
  Consider adding this directory to PATH or, if you prefer to suppress this warning, use --no-warn-script-location.

**Step 5:** Now to run a simple project open Visual Studio Code and type the following:

```
from flask import Flask app = Flask(__name__)  
@app.route("/") def hello_world():  
    return "<p>Hello, World! </p>"
```

And save the file as “**app.py**” copy its path and run it in the command prompt along with syntax **flask run**.
